Introduction

Graduate School of Automobile Technology (GSAT) was founded in 2006 with a mission to contribute to the Korean economy by providing highly educated professionals needed to keep the major domestic automobile technology competitive internationally. The graduate school also aims to innovate in the educational system by providing the educational service that fits to the requirement of the industry.

The goal of the School is providing professionals with mixed and practical technical skills, global awareness, management skill and creativity. Other goals include the development of next generation automobile technology in cooperation with the industry, and of interdisciplinary and project based educational system.

GSAT intends to be the world best educational organization by interdisciplinary coordination of education and research, industry internship system, joint research with the industry and corporation with the world leading automobile institutes. The education includes the compound technology for the future automobile, industrial management, project experience and internship. There are 42 professors joined from Mechanical Engineering, Electrical and Electronic Engineering and Industrial Engineering Departments and also Graduate School of Management.
