## Introduction

The Master of Software Engineering(MSE) and Master of Science in Information Technology - Software Engineering(MSIT-SE) programs are jointly offered by KAIST and Carnegie Mellon University (CMU) and focus on innovative theories taught in a combination of core and elective courses and their practical application in a mentored Studio environment. Graduates of the MSE and MSIT-SE programs not only understand how to apply the best of current practice, but also act as Agents of Change to improve that practice as the field evolves. The programs were founded jointly with the CMU's Software Engineering Institute (SEI). The programs draw on the expertise of faculty from the KAIST's Department of Computer Science and Carnegie Mellon's School of Computer Science. The students will study for a semester at CMU in Pittsburgh, United States. Graduates from these programs will receive their Master's degree from both KAIST and CMU.
