

Course Introduction

Graduate Program

Semiconductor academic engineering is designed to train highly educated manpower related to semiconductor design, device and process of "memory and system LSI" through customized education programs optimized for the company.

It aims to co-develop highly educated manpower with advanced academic knowledge and skills to build successful industry-academic cooperation models.

Starting with the selection of high quality graduate students of 2006, it is planned to bring up Masters and Doctors who are talented in both theories and experiments by means of well-designed education program which concentrates on semiconductor devices, processes and designs in the area of next generation memory and system LSI.
