Program

Minor Program in Science and Technology Policy

The STP Minor Program Provides aspiring S&T leaders in the undergraduate KAIST community with the oportunity to learn about the issues and problems of policymaking for S&T. Through the program, students will acquire the frameworks and tools to understand the various institutions, political, social, historical, and cultural factors that affect and are affected by S&T development. Students also meet and interact with current leaders and practitioners of S&T policy through regular colloquia, special lectures, or internships with public organizations.

Internship

Internship Program is an excellent chance to delve into the real world of policymaking and policy advising. In this short-term work at policy organizations, students learn how to do background research on a given policy issue and are often invited to write a section of a real policy proposal or report.

STP Colloquium

A flagship public lecture series of the school noted for thought-provoking presentations, the STP Colloquium encourages vigorous exchanges of criticisms and counter-criticisms and the experience of sharing the common ground among researchers and practitioners of the community of S&T policy.

Requirements

All KAIST undergraduate students who have declared their major are eligible to apply to the STP Minor Program.
