

Moon Soul Graduate School of Future Strategy

■ Introduction of Ph.D. Program

Amid uncertainties in the 21st century and growing global competition, Ph.D. program is established to educate and train future-oriented and tech-knowledge based professionals to meet the needs of government administration, business management, science journalism and intellectual property. KAIST's long history of educational competency and research capabilities in science and technology will provide a higher-level of knowledge and unprecedented experience in each student's field of expertise.

Moon Soul Graduate School of Future Strategy offers outstanding three Ph.D. programs in the following areas: (i) future strategy for government administration and technology and science as a new growth engine, (ii) science journalism for new media, marketing and disaster reporting and (iii) intellectual property for commercialization of new intellectual property and its settlement of conflicts.

IP	SJ	FS
Intellectual Property	Science Journalism	Future Strategy
		
To promote in-depth understanding of intellectual property issues while educating and training in intellectual property as well as engineering, law, and management.	To understand the convergence of science and technology and media culture and receiving education and training to lead in the new media age.	To devise a future strategy by understanding societal- and technological driving forces. Future-oriented students are educated and trained to adapt and strategize in changing international environments.
