

## Introduction to the Graduate School

- The graduate school seeks to promote biotech innovation corporations' global growth and to activate biotech innovation start-up companies by fostering technology and innovation management personnel needed by innovative corporations and venture companies in the biohealth field.
  
- We offer educational programs on innovation management strategies, technology management, intellectual property right management and strategies, biotech innovation organization management, industrial and technological changes, technological innovation and regulations, and business incubation and growth strategies for key talented figures at venture companies and innovative corporations in the biohealth field and key talented figures at relevant financial investment agencies such as venture capital(VC) and financial corporations in this field.
  
- In order to foster key talented figures such as business managers, scientist-turned entrepreneurs, and investors who seek to lead the future of the South Korean biohealth industry, we foster key talented figures in the nation' s biohealth industry through cooperation with the global biotech industry and North Chungcheong Province (Cheongju City).
