■ Overview

Graduate Program for Future strategy provides comprehensive education based on science oriented future forecasting framework to enable public officials and institutional researchers to deal with economic, social and international issues using various future forecasting tools. This graduate level program offers extensive lectures from business and economic to social welfare future strategies.

To fundamentally solve challenges in the entire humanity and global environment, it is necessary to educate and train focused but professional talents who can plan a long-term future strategy based on science and technology

“Tech-knowledge based Future Strategy”

■ Research Focus

● Science and technology based future forecasting

The curriculum is organized with core modules that introduces science originated future forecasting methodologies and cutting-edge science technologies (IT, BT, NT, ET, etc).

● Future strategy studies on broad fields

Elective modules include future strategy and detailed policy research experience about international, science, technology, economy, business and social welfare issues.
